

## Devon Energy Navigates Integration Complexity and Ensures Seamless Partner Data Sharing with PDS Energy

*Leading independent oil & gas producer leverages PDS Energy's Well Data Exchange Platform to provide uninterrupted self-service access to interest owners before, during, and after its merger with WPX Energy.*

### DEVON ENERGY BUSINESS CONTEXT

Devon Energy (NYSE: DVN) is a leading independent oil & gas producer with a focus on the Delaware, Eagle Ford, Anadarko, Powder River, and Williston basins. Devon Energy's portfolio consists of over 30,000 wells and - according to its Q2 2021 investor presentation - had reached 567,000 barrels of oil equivalent per day.

In January of 2021 Devon Energy and WPX Energy completed their merger, bringing an extensive portfolio of assets in the Permian and Williston under Devon Energy's management. Devon Energy needed to continue sharing production data and well documents with its interest owners while onboarding datasets from the merger and ensuring uninterrupted data delivery to WPX Energy's partners.

### WELL DATA DISTRIBUTION CHALLENGE

Following the merger, Devon Energy was responsible for distributing large volumes of well and production data to over 2,000 of its own and WPX Energy interest owners. This included daily wellsite data and documents - drilling, completions, workover reports, well logs, directional surveys, AFEs, among other document types - as well as daily and monthly oil & gas production volumes.

In addition to the challenge of sharing well information at scale with owners, the newly merged companies utilized different well databases with Devon Energy using WellView and WPX Energy using OpenWells. Devon Energy wanted to consolidate and automate its owner data distribution for both companies while enabling it to manage even more wells without adding head count.

### AT A GLANCE

**30,000+ WELLS**

Automatically Updated

**2,000+ PARTNERS**

with Easy Data Access

**567,000 BARRELS**

of Oil Equivalent Reported

**25 TYPES**

of Well Docs Managed

**250+ WELL DOCS**

Loaded on Average Per Day

*Our partner data sharing solution enables us to automate much of the process and manage more wells without adding more people while enabling us to navigate the complexities of our WPX merger, ensuring critical D&C data was readily available in WellView for analysis and business continuity.*

*Manager of Data Management*

## ABOUT DEVON ENERGY

Based in Oklahoma City, Devon Energy is a leading independent energy company engaged in finding and producing oil and natural gas with an emphasis on achieving strong returns and capital-efficient cash-flow growth.

### PDS ENERGY SOLUTIONS

- Well Data Exchange (WDX)

### AREAS OF OPERATION

- Delaware Basin
- Eagle Ford
- Anadarko Basin
- Powder River Basin
- Williston Basin

### DATA TYPES HOSTED AND DISTRIBUTED

- Daily Production
- Monthly Production
- Casing Inspection Log (CIL)
- Core Report/Analysis
- Data Trades
- Directional Drilling Report
- Directional Drilling Reports - Slide Reports
- Directional Surveys
- Flowback Report
- LWD Log
- MUD Log
- Mud Report
- Partner Completion and Workover Report
- Partner Completion Report
- Partner Daily Drilling Report
- Partner Facilities Report
- Permits
- Plats
- Premium Partner Daily Drilling Report
- Pressure Data/Analysis
- Well Data Requirements
- Wellbore Diagram
- Wireline Log

## DIGITAL OILFIELD TRANSFORMATION

Devon Energy and WPX Energy are participants in the PDS Energy Well Data Exchange (WDX), a reciprocal data sharing network for distributing structured and unstructured drilling and completion information along with daily and monthly production volumes to partners by automatically extracting well data from commercial databases like WellView.

Because WPX Energy was an existing WDX participant, Devon Energy was able to leverage partner distribution lists and entitlements (wells that each partner has permission to view) to accelerate data onboarding during the merger. PDS Energy also worked closely with both companies during the merger to rapidly migrate and map WPX Energy data from OpenWells into WellView.

PDS Energy is currently assisting Devon Energy in transitioning WPX Energy and its own production data management into ProdView, which will enable the producer to consolidate drilling, completions, and production data within WDX. This will provide seamless access to all exchange data and drive even higher levels of efficiency/ease of use for an increasing number of Devon Energy partners.

## MEASURING BUSINESS SUCCESS

PDS Energy enabled Devon Energy to provide seamless and uninterrupted data sharing for interest owners while enabling it to rapidly onboard WPX Energy data and make it instantly available for analysis and reporting by Devon Energy's employees, ensuring business continuity during a large-scale merger. By automating well data and production sharing and providing secure self-service access to its partners, Devon Energy is able to ensure delivery of well information at any scale with a lean team, including daily partner drilling, completions, and workovers. PDS Energy provides Devon Energy with turnkey unstructured well data management through a dedicated well file loading team as well as enabling vendors to directly upload files over the web.
